

Dataset	Task	Resource	Metric	Size
In-hospital Diagnosis (Period #4) (ID#4)	Clinical QA	Medical Case	Accuracy	2728
Description				
<p>The fourth stage of patient consultation, the patient has recuperated, necessitating the physician to formulate discharge advice that considers the patient’s admission and discharge statuses, alongside the timeline of diagnosis and treatment.</p>				
Design Rationale				
<p>Discharge planning is critical for patient care continuity and involves synthesizing complex information into actionable advice, including medications, follow-up appointments, and patient education. Assessing the LLMs’ ability to produce accurate discharge advice evaluates their grasp of clinical guidelines, patient safety considerations, and communication skills.</p>				
Example				
Prompt	<p>你是一位专业的医生，你可以理解病例中的患者状态和治疗手段，并给出相应的建议..... \n 接下来我将提供给你一份即将出院的患者的病例记录，你需要根据其中的内容来提供他的出院医嘱..... \n 以下是提供的患者病例记录:</p> <p>You are a professional physician, capable of understanding the patient’s condition and treatment options in the case, and providing corresponding recommendations..... \n Next, I will provide you with a patient’s case record who is about to be discharged, and you need to provide their discharge instructions based on the contents..... \n Below is the provided patient case record:</p>			
Input	<p>## 入院情况: 患者因“发热咳嗽 1 月余”入院。..... \n## 诊疗过程: 患者入院完善相关检查先后予左氧氟沙星..... \n## 出院情况: 患者无胸闷气喘无明显 ## 选项: A. 1. 糖尿病饮食适当日晒、补钙避免跌倒。2. 继续服用药物治疗... \nB. \nC. \nD.</p> <p>##Admission condition: The patient was admitted due to "fever and cough for over 1 month"... \n##Diagnostic and treatment process: Upon admission, the patient underwent relevant examinations and was subsequently administered levofloxacin... \n##Discharge condition: The patient had no chest tightness or shortness of breath. ##Options: A. 1. Diabetic diet appropriate sun exposure, calcium supplementation to prevent falls. 2. Continue medication treatment... \nB. ... \nC. ... \nD. ...</p>
